

“HAYKAKAN ATOMAYIN ELECTRAKAYAN” CLOSED JOINT STOCK COMPANY
(ARMENIAN NUCLEAR POWER PLANT)

National Strategy in Nuclear Energy Innovations

Artur Mkrtchyan
Head of Production and
Technical Department ANPP

Armenian NPP

- The Armenian NPP consists of two units with WWER-440 (V-270) type pressurized water reactors.
- The ANPP Unit 1 was put into commercial operation in 1976 and Unit 2 – in 1980.
- The Unit 1 is Decommissioned
- The Unit 2 installed capacity -455 MW(e)
- The Unit 2 In operation , lifetime extended up to 2026
- The Unit 2 second lifetime extension up to 2036 is in process

ELECTRICITY GENERATION

Key Policy Directions

In accordance with Energy Sector Development Strategy Program the government's priorities in the energy sector through 2040 are:

- Maximum use of the country's potential for renewable energy and energy efficiency to have clean energy mix(renewable with nuclear);
- Extending the life of the ANPP beyond 2026, as well as construction of a new nuclear power plant to replace it;
- Construction of a “North-South Corridor” by increasing power transmission links between Armenia and Georgia and between Armenia and Iran; and
- Gradual liberalisation of the domestic electricity market.

NEW REACTOR

Ministry of Territorial Administration and infrastructure was weighing the choice of:

- Russian dual VVER-1200MW
- South Korean APR-1000/1400MW
- American small modular reactor designs

RENEWABLE ENERGY

The government's ambitious plan:

- ❑ Increase renewables to 66% of the power generation mix by 2036 includes small hydro, wind and solar PV resources. To reach this target, Armenia will need to have 2 185 MW of new renewable energy capacity installed by 2036
- ❑ Construct new nuclear power plant
- ❑ By 2040 achieve net-zero goal

THANK YOU FOR YOUR ATTENTION!
